Stabilizer Carriage

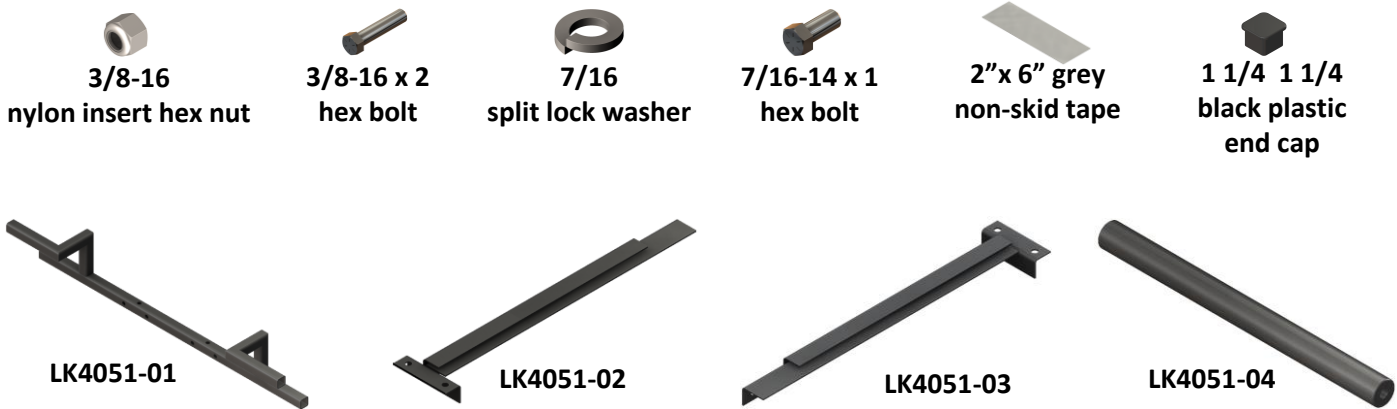

The LK4051 Stabilizer Carriage straddles the legs of the LK4000 Lift King (Main Component) and is designed for set up within seconds, without the need of pins or bolts. When the pickup box is on the lift, most shops use the LK4027 Stabilizer Bar while performing repairs. When the Stabilizer Bar is used in conjunction with the Stabilizer Carriage, the operator has the ability to move the pickup box around the shop.
