INSTRUCTIONS

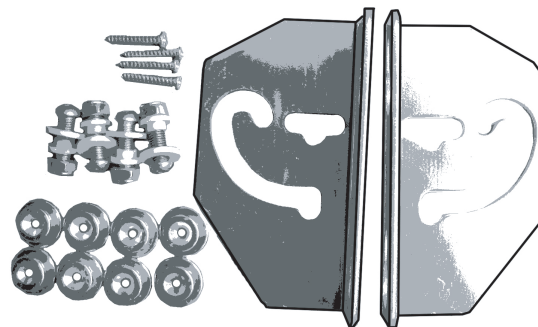

Pit Posse Removable Workbench P/N806

Tools required for assembly:
2 -17mm wrench or socket
1 - 6mm allen head wrench

Hardware included:

8 - mounting buttons
4 - wall screws
4 - allen head cap screws w/bushings
2 - aluminum 'L' hinge brackets

- 1)** Mount 4 aluminum 'Mounting Buttons' to the wall using 48" centers between the 2 brackets. Each bracket should have buttons located 4.25" centers vertically. Table top will sit approximately at the level with the bottom portion of the upper 'keyhole' on the brackets so be sure to locate them at a comfortable working height. Extra 4 buttons are for 2nd mounting location to allow work bench to be easily moved and utilized.

- 2)** When attaching the workbench to the brackets, be sure that table will fold downward when storing - reference diagram to the left. The 2 plastic flat washers will go between the table top and the bracket, while the 2 plastic 'hat' style washers will go on the outside with the allen head with the bushing portion riding inside the slots of the bracket.

- 3)** Table should lift easily, following slots in bracket. Lifting beyond level, will allow you to slide the table toward the wall and drop into its secure position. You should visually check to be sure that both sides have fully engaged properly.

4) PLEASE NOTE - The work bench is designed to support up to 300#, but if the surface you are mounting to with the 4 screws is unable to support such a weight, then please do not assume it will do so. It is only as strong as the screws and the surface in which you are securing to.
