

PitProducts Sportsman Tire Rack

If you have any questions please give us a call. Toll free 1866 849 7786

Best way to put your tire rack together is to set all the parts on the floor, in the position they go. The long tubes with the welded tabs on the ends are the center portions of the racks.

Then assemble the bolts through the rack. Once you have all the bolts in, go ahead and tighten them up.

Then go ahead and install in trailer with supplies tek screws. Remember to use two tek screws on top and bottom of each upright bar, and to put LOCTITE on each screw.

If mounting into a shop wall you will want to use a wood lag screw.
